About

Software Engineer with over 2 years of professional experience specializing in building production-grade full-stack applications and orchestrating advanced Multi-Agent AI systems. Highly proficient in Python backend systems and React frontends, with deep expertise engineering agentic architectures, optimizing real-time database models, and implementing strict model validation and risk-mitigation observability guardrails across complex corporate data workflows.

Education

SRM Institute of Science and Technology

Sept 2021 – May 2025

B. Tech in Computer Science (Data Science)

Chennai, India

- GPA: 8.69

Experience

Programmer Analyst (NeuroAI Team)

November 2025 – Present

Cognizant

- Architected end-to-end full-stack AI solutions utilizing a React frontend and Python backend, deploying highly performant asynchronous REST APIs via Uvicorn and fully documented Swagger UI layouts.
- Engineered sophisticated multi-agent automation workflows leveraging Microsoft AutoGen, Azure AI Foundry, and the Model Application Framework (MAF) to automate validation and reduce legacy duplication of effort.
- Established enterprise-grade model risk governance and observability pipelines across systems using telemetry and evaluation toolsets including Arize, DeepEval, Ragas, and Galileo.
- Enforced system infrastructure security configurations using fine-grained IAM frameworks, network isolation, and encryption to ensure model behavior adherence within highly regulated data environments.

Data Science Intern

June 2025 – July 2025

InfoBharatInterns

- Managed intensive data cleanup, feature engineering, and processing workflows over unstructured text repositories containing more than 568,454 records.
- Developed natural language processing pipelines and fine-tuned statistical algorithms to secure an 87% model classification accuracy rating.
- Designed a real-time interactive evaluation dashboard using web interface frameworks, reducing manual validation processing overhead by 70%.
- Maximized precision metrics by 5% through structured hyperparameter calibration, thorough evaluation metrics, and system optimization routines.

Projects

Dionysus - Codebase Intelligence & Automation Platform

[github link](#) 

- Engineered an enterprise codebase parsing solution using TypeScript, React, and Python to scan and map comprehensive multi-file data paths.
- Integrated Large Language Model frameworks utilizing Google Gemini embeddings and LangChain orchestration to execute automated document analysis and multi-user Q&A.
- Designed a high-performance semantic search database architecture leveraging PostgreSQL and the pgvector extension, completing data queries within milliseconds.
- Programmed strict workspace access permissions and role-based data isolation mechanics to preserve data controls and configuration integrity.

Risk Classification and Text Optimization using BERT

[colab link](#) 

- Fine-tuned a deep learning BERT network architecture to categorize complex unstructured data segments, attaining a 92% overall verification accuracy rate.
- Programmed data preprocessing blocks, optimization hyperparameters, and evaluation boundaries in PyTorch to increase prediction precision by 5%.
- Utilized Python data analysis libraries (Pandas, NumPy, Scikit-learn) to perform rigorous exploratory data mining and map error tracking profiles.

Brainstack - Secure Corporate Portal and Dashboard

[github link](#) 

- Constructed a centralized administrative data hub using React, TypeScript, and MongoDB to compile and render 8 distinct information frameworks.
- Designed multi-stage MongoDB aggregation pipelines to handle heavy backend querying, real-time filtering, and multi-tier sorting loops.
- Configured safe authorization routines via secure OAuth connection layers to protect data entry pathways and validate structural edit rights.

Certifications

Full-Stack Systems and Infrastructure Cohort 2.0 (100xDevs)

Aug 2024

- Advanced training across TypeScript and React application development architectures, performance caching (Redis), and message distribution engines (Kafka).

Architecting with Google Kubernetes Engine

March 2024

Coursera

- Specialized in container orchestration, microservices cluster setup, routing controls, and system deployment configuration testing (Score: 97.91%).

Supervised Machine Learning: Regression and Classification

Oct 2023

Coursera

- Mastered linear and logistic regression models, decision matrices, statistical significance inference, and systematic hypothesis validation workflows (Score: 99.6%).

Skills

Technical Stack: Python, TypeScript, React, Next.js, Node.js, SQL (PostgreSQL), Uvicorn, Swagger UI, Tornado framework (Familiar), Redis, Kafka.

AI Agents & LLM Orchestration: Microsoft AutoGen, Azure AI Foundry, Model Application Framework (MAF), LangChain, RAG, Tokenization.

Model Governance & Observability: Arize, DeepEval, Ragas, Galileo, Data Controls, Target Hypothesis Testing.

Cloud & DevOps: AWS, Docker, Kubernetes, Jenkins, Terraform, Git, Automated CI/CD Engineering.

Extracurricular Activities

Chess, Basketball, Cycling, Badminton, Karate
